Re: 2-D Seismic work

Larry -

As long as there is no mechanized equipment there is no permit necessary.
(If they built roads for a thumper truck the new roads would need to be
permitted). DOGM requests them to use the proper safety cautions when they
energize their lines and remove all equipment when they are complete.

Is there a specific site location that I can file this email under. thx-lah

Leslie - I have a question... Does the State require any type of permit if a claimant wants to conduct 2-D induced polarization and magnetotellurics on private surface/federal minerals if there would be little or no surface disturbance (brush cutting with hand tools) and no mechanized equipment used?
